

Rank higher on Google — without writing a single meta tag

AIS SEO Meta Manager scans every published post and page on your WordPress site, finds the ones with missing or weak **meta titles** and **meta descriptions** (the headline and blurb Google shows in search results), and uses AI to write optimized replacements tuned to *your* keywords, audience, and business. Nothing goes live without your approval — every AI draft waits for you to review, edit, and approve it.

Quick Start — 5 minutes

1. In WordPress, open **AIS SEO** in the left admin menu.
2. On the **Settings** tab, fill in your SEO Context (see below) and click **Save Settings**. Your connection details are pre-configured by AI Solutions.
3. On the **Hosting** tab, pick a plan and click **Subscribe**. Checkout is handled on Stripe's secure page; your license activates on your site automatically within a minute or two, and you'll receive a confirmation email.
4. On the **Scan** tab, tick the pages you want improved and click **Generate Meta with AI**.
5. On the **Review Drafts** tab, approve (or tweak) each suggestion. Approved meta is written to Yoast SEO instantly and Google picks it up on its next crawl.

Your SEO Context — the secret to great results

The AI writes better meta the more it knows about your business. On the **Settings** tab:

Website Description	2–4 sentences: what you do, who you serve, what makes you different.
Target Keywords	One per line — the search terms you want to rank for (e.g. “buyer broker Sarasota”).
Target Phrases	Longer, question-style searches your customers type (e.g. “how to buy a home without a listing agent”).
Target Audience	Who you're talking to — the AI matches its tone to them.

Tip: update these whenever your services or focus change — every new batch of AI drafts uses the latest context.

Plans & monthly AI allowance

Plan	Price	AI generations / month
Basic	\$10/mo	25
Advanced	\$25/mo	100
Pro (most popular)	\$50/mo	300
Elite	\$75/mo	1,000

One generation = one AI-written title + description for one page. Every plan includes the full scan and review workflow — the plan sets only your monthly allowance, which resets on the 1st. Your usage meter is on the Hosting tab. To change or cancel your plan, email **support@ais.email**.

Understanding the Scan tab

The scan runs live every time you open the tab and grades every published post and page:

Missing	No meta title or description at all — Google is improvising. Fix these first.
Template	Only Yoast's automatic template (e.g. “Page Title - Site Name”) — no custom SEO copy was ever written. High-value targets.
Improve	Custom meta exists but has issues: too short or long for Google, duplicated text, or none of your target keywords.
OK	Meta is present, properly sized, and on-keyword. Nothing to do.

Use the filter links (Needs Attention / Missing / Template / Improve / All) to focus the list, and the bar at the top to choose which content types to scan and how many items go in each AI batch. Stick to content with real public URLs (Posts, Pages, Products) — builder items like Elementor Templates aren't indexed by Google and would spend your allowance for nothing.

Generating & reviewing drafts

Generate: tick the boxes next to the pages you want, click **Generate Meta with AI**, and give it about a minute. Drafts land on the **Review Drafts** tab (the AIS SEO menu shows a count badge when drafts are waiting).

Review: each draft shows the current meta next to the AI's proposal, the reason the page was flagged, and the keyword strategy the AI used. Live character counters keep you inside Google's limits (60 for titles, 155 for descriptions).

Approve & Apply writes the meta to Yoast SEO immediately — edit the text first if you like. **Reject** discards the draft; rejected pages can always be re-sent later.

Approving is safe and reversible: you can re-generate or hand-edit any page's meta in Yoast at any time. Expect Google to reflect changes over days to a few weeks as it re-crawls your site.

Troubleshooting

My drafts never arrived.

Give it two minutes and refresh Review Drafts. Large batches take longer. Still empty? Email support with the time you sent the batch.

"Monthly quota exceeded" message.

You've used this month's allowance. Upgrade on the Hosting tab for more, or wait for the reset on the 1st.

"Subscription is past_due."

Your card payment failed. Update your card via the email Stripe sent you, or contact support and we'll send a fresh payment link.

I paid but the Hosting tab doesn't show my plan.

Activation is usually under two minutes. If it's been longer, refresh once more, then email support — we're alerted to every new subscription and can activate manually.

A page shows OK but I want better meta anyway.

Switch the filter to All, tick the page, and generate — the AI will still improve on what's there.
